

COMsolve

Technical Solutions

CTS specializes in the construction, installation, and maintenance of wireline and wireless networks across North America.

As a highly experienced contractor within the telecom industry, we know there is no one-size-fits-all solution. That is why we offer a comprehensive selection of telecom-specific applications including macro, micro, pico, and small cell builds, and the knowledge to select the right choice for your network.

Boosting your network performance has never been easier.

DEPLOYMENT OFFERINGS

CELL SITE BUILDS & INSTALLATION

Customized cell site design and installation including macro, micro, pico, and small cell solutions.

TOWER & ROOFTOP BUILDS

From civil steelwork and superstructure to line and antenna, radio and cable installations, we provide a build process that is proven and tested from planning to completion.

DAS IN-BUILDING

End-to-end planning & design, installation, testing, and maintenance services for Distributed Antenna Systems.

RF PLANNING SERVICES

Bespoke design & verification services for a wide range of RF, Microwave, and mmWave projects.

NETWORK CABLING SERVICES

Planning and installation of customized cabling requirements for variable-sized networks.

WHY CHOOSE US

Experienced telecom, project management, and IT professionals who take responsibility for your project.

We guarantee successful implementation of your project based on strict industry quality standards.
